Es gibt kaum etwas auf dieser Welt, das nicht irgend jemand ein wenig schlechter machen und etwas billiger verkaufen könnte, und die Menschen, die sich nur am Preis orientieren, werden die gerechte Beute solcher Machenschaften. Es ist unklug, zu viel zu bezahlen, aber es ist noch schlechter, zu wenig zu bezahlen. Wenn Sie zu viel bezahlen, verlieren Sie etwas Geld, das ist alles. Wenn Sie dagegen zu wenig bezahlen, verlieren Sie manchmal alles, da der gekaufte Gegenstand die ihm zugedachte Aufgabe nicht erfüllen kann. Das Gesetz der Wirtschaft verbietet es, für wenig Geld viel Wert zu erhalten. Nehmen Sie das niedrigste Angebot an, müssen Sie für das Risiko, das Sie eingehen, etwas hinzurechnen. Und wenn Sie das tun, dann haben Sie auch genug Geld, um für etwas Besseres zu bezahlen.

John Ruskin
engl. Sozialreformer (1819-1900)

There is nothing in this World, that someone cannot make in a lesser form to enable it to be sold for less, and thus, people who orientate themselves solely by price, are worthy victims of this phenomenon. It is unwise, to pay too much, but it is even worse to pay too little. If you pay too much, you loose a little money, that is all. If you pay too little, you sometimes loose everything, as the purchased item does not fulfill the purpose it was originally purchased for. The law of economics forbids us to obtain high value for a low price. If you accept the lowest offer, you have to accept the risk that you may have to pay more. Should you accept this risk, then you certainly have enough money to purchase something better to begin with.

John Ruskin
engl. social reformer (1819-1900)

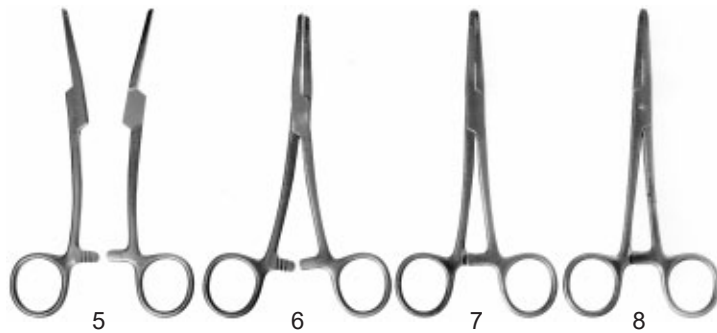

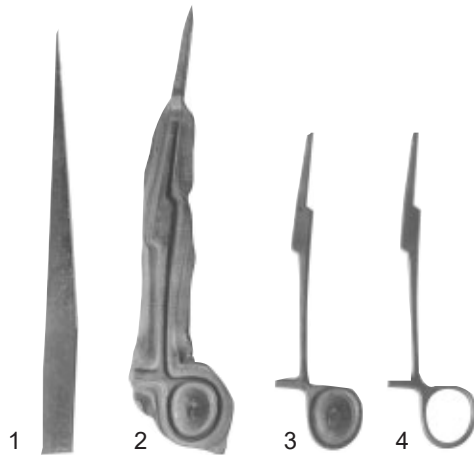

Non esiste cosa a questo mondo che non possa essere offerta in qualità inferiore e che possa essere venduta ad un prezzo più conveniente. Le persone, che si orientano solo secondo il prezzo, diventano la giusta preda di queste macchinazioni. Non è intelligente, pagare troppo, ma è ancora peggio pagare troppo poco. Quando pagate troppo, perdete un po' di denaro, questo è tutto. Quando al contrario pagate troppo poco perdete talvolta tutto, perchè l'oggetto comprato non soddisfa i fini per cui era stato concepito. Le leggi dell'economia proibiscono di ottenere molto valore in cambio di poco denaro. Quando scegliete l'offerta più bassa, dovete calcolare sempre qualcosa in più per il rischio a cui andate incontro. E, se fate questo, allora avete abbastanza denaro per pagare qualcosa di miglior qualità.

John Ruskin
Riformatore Sociale ingl. (1819-1900)

Ne postoji ništa na svijetu što se ne može napraviti u lošijem obliku kako bi se prodalo jeftinije, zato ljudi koji se orijentiraju samo po cijeni su česte žrtve ovog fenomena. Nije mudro platiti previše, ali nije mudro ni platiti premalo. Kada platite više, gubite malo novca i to je sve. Kada platite malo, katkada gubite sve, jer ono što ste kupili nije u stanju ispuniti sve zahtjeve zbog kojih je ta stvar kupljena. Uobičajeni zakon poslovne ravnoteže je platiti malo a dobiti puno. To je nemoguće! Ako kupujete po najnižoj cijeni plaćate i rizik mogućeg nezadovoljstva onim što ste kupili, a to znači da imate dovoljno novca odmah kupiti najkvalitetnije.

Fabrikneue chirurgische Instrumente sind vor der ersten Sterilisation zu reinigen.

Arterienklemmen müssen im geöffnetem Zustand gereinigt werden.

Vor dem Sterilisieren, d.h. beim Zusammenstellen der Operationssiebe sollte die die Rastensperre nur im ersten Zahn geschlossen werden, dadurch wird vermieden, daß die Instrumente während der Sterilisation (Temperaturerhöhung auf 134°C) unter Spannung stehen und Spannungsrisse im Schluß auftreten. Das Zureichen während der OP wird erleichtert.

Sterilisation ist kein Ersatz für Sauberkeit!

Brand new surgical instruments should be cleaned before they are sterilized.

Haemostatic forceps should be open at the jaw end when they are cleaned.

Before the instruments are put into the sterilization tray, the ratchet should be fixed into the first notch. This is done to prevent tension or even tension cracks in the joint area during sterilization (temperatures of up to 134°C).

Serving the instruments during the operation is made easier.

Sterilization does not replacement cleanliness!

Nuovi strumenti chirurgici, primo della prima sterilizzazione debbono essere lavati.

Le pinze emostatiche debbono essere pulite in posizione aperta.

Prima della sterilizzazione, quindi durante la composizione dei set operativi, la cremagliera delle pinze emostatiche dovrebbe essere chiusa solo nel primo scatto. Così, si evita che gli strumenti siano sotto pressione durante la sterilizzazione (aumento di temperatura fino a 134°C) e ciò potrebbe infatti causare delle screpolature di tensione sull'incastro dello strumento.

Durante l'intervento, il passaggio degli strumenti al chirurgo é piu facile.

La sterilizzazione non sostituisce la pulizia!

Novi kirurški instrumenti se moraju očistiti prije sterilizacije.

Hemostati i hvataljke moraju imati otvorene čeljusti pri čišćenju i sterilizaciji.

Prije početka sterilizacije postavite kočnicu na prvi zubac. Ovo se radi kako bi se izbjegla tenzija ili napuknuća u pregibima prilikom sterilizacije (temperature do 134°C).

Na ovaj način je i lakše posluživanje instrumenata prilikom operacije.

Sterilizacija ne zamjenjuje čistoću instrumenta!

C = carbide T = tungsten

C = carburo T = tungsteno

C = karbid T = tungsten

Tungsten oder Wolfram ist ein metallisches Element, welches im Jahre 1783 durch den schwedischen Chemiker Karl Wilhelm Scheele entdeckt wurde.

Elementsymbol = W, Ordnungszahl = 74, Atomgewicht = 183,86, Schmelzpunkt liegt bei ca. 3380°C, also höher als bei allen anderen bekannten Metallen, der Siedepunkt liegt bei 5500°C.

In Legierung mit metallischen Carbiden liegt die Härte annähernd beim Diamanten.

Tungsten Carbide ist das härteste von menschenhand geschaffene Metall.

Tungston or Wolfram is a metal element that was discovered in 1783 by the Swedish chemist Karl Wilhelm Scheele.

Element symbol = W, Ident. Number = 74, Atom weight = 183,86. Melting point is approx. 3380°C, (higher than all other know metals), boiling point is 5500°C.

When combined as an alloy with metal carbides, it achieves nearly diamond hardness.

Tungsten Carbide is the hardes man-made material.

Tungsteno o Wolfram é un elemento metallico, che fu scoperto nell'anno 1783 dal Chimico svedese Karl Wilhelm Scheele.

Simbolo d'elemento = W, numero ordinale = 74, peso atomico = 183,86, il punto di fusione si trova a ca. 3380°C, quindi più alto di tutti gli altri metalli conosciuti, il punto d'ebollizione si trova a 5500°C.

Il tungsteno in lega con il carburo raggiunge un grado di durezza vicino a quello del diamante.

Carburo di tungsteno é la lega di metallo più dura fino ad ora sviluppata da mani umane.

Tungsten ili Volfram je metal koji je 1783 g. otkrio švedski kemičar Karl Wilhelm Scheele.

Kemijski simbol = W, Atomski broj = 74, Atomska masa = 183,86. Točka tališta mu je približno na 3380°C, viša nego bilo kojem drugom poznatom metalu, vrelište mu je na 5500°C. Pri izradi legure s metalnim karbidima postiže približno dijamantnu čvrstoću.

Volframov karbid je najčvršći materijal kojeg je čovjek napravio.

C = carbide T = tungsten

C = karbid T = tungsten

Tungsten oder Wolfram ist ein metallisches Element, welches im Jahre 1783 durch den schwedischen Chemiker Karl Wilhelm Scheele entdeckt wurde.

Elementsymbol = W, Ordnungszahl = 74, Atomgewicht = 183,86, Schmelzpunkt liegt bei ca. 3380°C, also höher als bei allen anderen bekannten Metallen, der Siedepunkt liegt bei 5500°C.

In Legierung mit metallischen Carbiden liegt die Härte annähernd beim Diamanten.

Tungsten Carbide ist das härteste von menschenhand geschaffene Metall.

Tungston or Wolfram is a metal element that was discovered in 1783 by the Swedish chemist Karl Wilhelm Scheele.

Element symbol = W, Ident. Number = 74, Atom weight = 183,86. Melting point is approx. 3380°C, (higher than all other know metals), boiling point is 5500°C.

When combined as an alloy with metal carbides, it achieves nearly diamond hardness.

Tungsten Carbide is the hardes man-made material.

Tungsteno o Wolfram é un elemento metallico, che fu scoperto nell'anno 1783 dal Chimico svedese Karl Wilhelm Scheele.

Simbolo d'elemento = W, numero ordinale = 74, peso atomico = 183,86, il punto di fusione si trova a ca. 3380°C, quindi più alto di tutti gli altri metalli conosciuti, il punto d'ebollizione si trova a 5500°C.

Il tungsteno in lega con il carburo raggiunge un grado di durezza vicino a quello del diamante.

Carburo di tungsteno é la lega di metallo più dura fino ad ora sviluppata da mani umane.

Tungsten ili Volfram je metal koji je 1783 g. otkrio švedski kemičar Karl Wilhelm Scheele.

Kemijski simbol = W, Atomski broj = 74, Atomska masa = 183,86. Točka tališta mu je približno na 3380°C, viša nego bilo kojem drugom poznatom metalu, vrelište mu je na 5500°C. Pri izradi legure s metalnim karbidima postiže približno dijamantnu čvrstoću.

Volframov karbid je najčvršći materijal kojeg je čovjek napravio.
